

- **Analysis Questions:**

- ❖ **Churn Analysis:**

- What is the overall churn rate?
 - What are the key differences in average demographic and behavioral metrics between customers who have churned and those who are active?

- ❖ **Demographic Analysis:**

- Is there a noticeable difference in churn between males and females?
 - Does age have a significant impact on churn rate?
 - Age group with the highest Churn Rate

- ❖ **Usage Behavior:**

- Does churn differ based on usage frequency?
 - Which usage frequency segments have the highest churn rates?

- ❖ **Customer Tenure:**

- Does Churn vary based on Customer Tenure?
 - Are there specific tenure patterns that are strongly linked to churn?

- ❖ **Customer Support Interaction:**

- What is the average number of support calls for churned customers?
 - Is a higher number of support calls associated with increased churn?

❖ **Financial Behavior:**

- Avg payment delay for churned vs non-churned
- Does payment delay affect churn rates?
- Avg Total Spend for churned & retained customers
- Do low-spending customers have higher churn?

❖ **Subscription & Contract Analysis:**

- Which subscription types have the highest churn rate?
- How does subscription types affect churn?
- How does contract length affect churn?
- How does the customer churn rate vary based on the combination of Subscription Type and Contract Length?

❖ **Customer Engagement & Interaction:**

- How does the number of days since the last interaction affect churn?

❖ **Combined Variable Analysis:**

- Is high support-call frequency combined with certain subscription types a key churn indicator?
- Does usage frequency decline before churn (possible early warning sign)?
- Is there any relationship between support calls and payment delay?
- Age group with the highest total spend among churned customers
- Compare support call patterns for churned vs non-churned customers by age group
- Relationship between age and usage frequency
- Relationship between age and payment delay
